

Hepiflor®

10 capsules

Food supplement

General data

Probiotics are live microorganisms with beneficial effects on host-body by modulating the balance of gastric flora.

Probiotics may prevent the action of harmful bacteria on human body.

Probiotics may modulate the immunity system by preserving the body defence.

Probiotics keep the balance of gastric flora by increasing the number of beneficial bacteria.

Recommendations of use

Hepiflor® is recommended in association with oral antibiotic, for the restoration of gastric flora balance.

Hepiflor® contributes to maintenance and restoration of gastric balance during transit disorders, which may occur pursuant to treatment with oral antibiotics (diarrhea associated to antibiotics).

One capsule contains 65.66 mg (10 billion UFC/capsule) live cultures of

Live cultures	Composition percentage
